## **DETAILED ACTION**

#### Response to Arguments

1. Applicant's arguments with respect to claims 2-4, 8-9, and 18-19 have been considered but are most in view of the new ground(s) of rejection based upon Applicant's claim amendments.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 2-4, 8-9, and 18-19 are rejected under 35 U.S.C. 102(a) as being anticipated by United States Patent no. 6,645,649, Tanaka et al.

Regarding claims 19 and 4

Tanaka et al disclose a surface coated sintered body of silicon nitride (substrate) with a coating layer (environmental barrier) formed thereon with a protection layer (velocity barrier) layer formed on the coating layer. The protection layer has a porosity of 5-30%. The coating layer comprises a rare earth silicate and the protection layer also comprises a rare earth silicate, (columns 17-19, claims 1 and 8). Yttrium is one of the preferred rare earth elements, (column 5, lines 7-17). The rare earth silicate of the protection layer can have the same molar ratio as the coating layer (column 5, lines 25-37), wherein the molar ratio of silica/rare earth is from 0.9-1.02

for monosilicate and 0.9-2.3 for a mixed monosilicate/disilicate layer, (column 4, lines 52-64), meeting the limitations of claims 19 and 4.

Regarding claims 2-3, 8-9, and 18

When the structure recited in the reference is substantially identical to that of the claims, the claimed properties or function are presumed inherent. MPEP 2112.01. Because the prior art exemplifies the applicant's claimed thermal barrier composite structure, the claimed physical are inherently present in the prior art. Absent an objective showing to the contrary, the addition of the claimed physical properties to the claim language fails to provide patentable distinction over the prior art of record, meeting the limitations of claims 2-3 and 8-9.

The coating layer and the protection layer are can be used on turbine parts, (column 1, lines 5-16), meeting the limitations of claim 18.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gwendolyn Blackwell whose telephone number is (571) 272-1533. The examiner can normally be reached on Monday - Thursday; 6:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer McNeil can be reached on (571) 272-1540. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
